Reference: Garderie Aimee

Dear Sir/Madam

I am writing in support of the Garderie Aimee. My wife and I have been utilizing this daycare for approximately almost four years. The Garderie Aimee currently cares for our three children, they range in age between 16 months and almost four years old.

I have always found the daycare in general and the staff in particular warm, considerate and helpful. Our children all joined the day care at the age of 3 months. Indeed, when we first started using the daycare we ourselves were relatively new parents with no family support close by and it was the daycare staff that on many occasions gave us invaluable advice in caring for our child. Even today at the end of the day the staff always let us know what our children have been doing and if there is anything to be aware off as well as posting the information on notice boards for the parents to see.

I appreciate many aspects of the daycare, in particular the many activities that the children get to participate in whether they be special trips to petting zoos or simply going to the park regularly. I believe that such activities are an excellent opportunity for my children (the oldest one especially) to experience new and different things. I am someone who values education and as such I am very pleased with teaching which forms part of oldest child's day. He is able to write his name and the numbers 1 to 10, he can easily count up to 20. He also knows the days of the week and the months of the year in both official languages. Indeed as someone who is not fluent in French, I am delighted to find that my oldest child is learning both languages.

One aspect of the Garderie aimee's care that I have approved of his the meals serve. They have always had in my opinion a well balanced menu. However, I was delighted to see the recently introduced nutritionist recommended 4 week rotating menu. I believe this is yet another aspect of the totally professional and yet kind approach that the Garderie aimee has in the care and development of the children under its charge and as such I strongly recommend this facility.

Yours faithfully
